A heatmap visualization showing the importance of features across different categories. The x-axis represents 1000 features, and the y-axis represents 1000 features. The color scale ranges from dark purple (low importance) to yellow (high importance). The heatmap shows a strong diagonal pattern, indicating that features are most important when they are the same. There are also some off-diagonal patterns, suggesting some features are important for multiple categories.

DMDT for B4-H

Heatmap visualization of the 1000 most differentially expressed genes across 10 samples. The color scale ranges from yellow (high expression) to dark purple (low expression). The first two samples show high expression (yellow) for the first two genes, while the remaining samples show low expression (dark purple) for the same genes.
